

# BAMBI BUCKET®

## BAMBI BUCKET® VALVE

The original design since 1982 provides a simple solution with a single dump valve offering highly effective precision drops at a low cost. The Bambi Bucket® is fully collapsible, easy to transport and readily configured for aerial fire fighting.

## POWERFILL™ SNORKEL

Designed specifically for standard Bambi Buckets®, the Powerfill system allows bottom-filling capability from as little as 18 inches (45 cm) of water. The PowerFill allows for quicker turn times by accessing shallow sources and facilitating quicker dips.

## AQUALANCHE™ VALVE

Available as a complete bucket or retrofit valve option, gives the Bambi Bucket® complete multi-dump capability. Add the Aqualanche™ to your aerial firefighting arsenal. Ideal for medium helicopter operators looking for a low-cost multi-dump bucket.

## MARINE RECOVERY DEVICE (MRD)

The Marine Recovery Device is designed to decrease the potential for loss of Bambi Buckets® dropped over water sources. The MRD will automatically deploy if the bucket is released.

# BAMBI TORRENTULA™

## TORRENTULA® VALVE

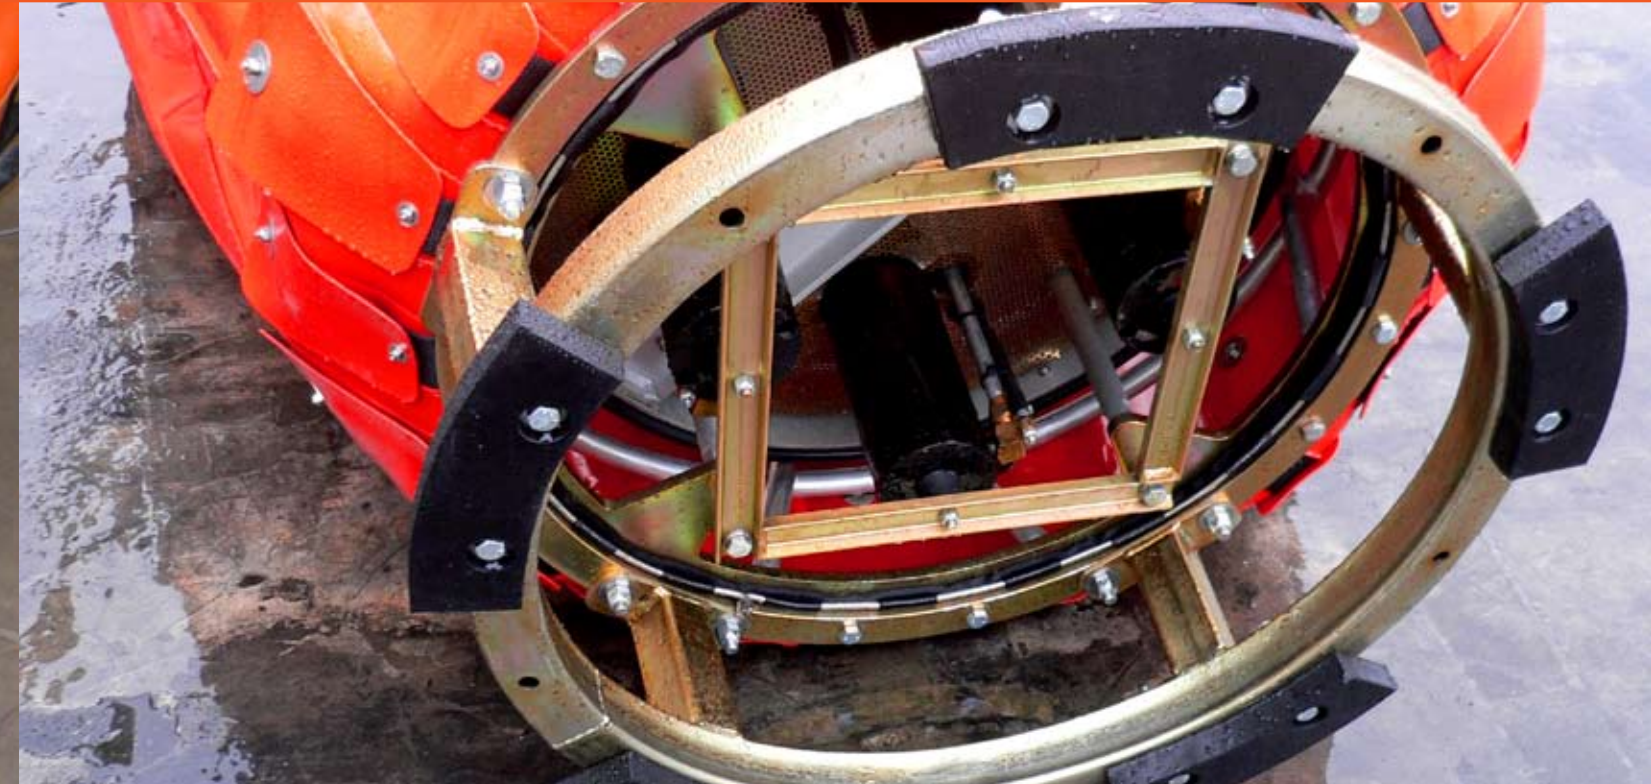

The Torrentula® provides operators with excellent precision in multiple drops and/or variable flow rates – it's the most versatile, innovative valve available. Compatible with the PowerFill™ option integrated within the Torrentula valve.

## MISSION TRACKER

The Mission Tracker adds the power of GPS and data recording to your firefighting, as well as a number of other advanced features including electronic load control. Tracking missions towards increased performance and efficiency.

## FIRESOCK™

The Firesock™ is designed to give Bambi Bucket® more coverage, improve suppression capability by increasing aeration of the fire suppressant. Ideal for fast moving grass fires.

## SACKSAFOAM™ I

The Sacksafoam™ I is a foam injection system for the transfer and dispensing of aerial firefighting foam, specially designed to be utilized in tandem with the Bambi Bucket.

## SACKSAFOAM™ II & III

The Sacksafoam™ II and III models are designed for larger helicopters to be used alongside either the Bambi®, Aqualanche™ or Torrentula™ Bucket. These units deliver precise, reliable foam injection.

## MOBILE UTILITY CART

Allows operators of heavier Torrentula® Valve Bambi Buckets® to quickly pack and transport buckets on the ground, without the need for forklifts or hoists.

## REMOTE POWER SUPPLY

The Remote Power Supply allows for independent operation of the bucket dump valve without connecting to aircraft power supply.

## POWERFILL™ TORRENTULA™

The PowerFill™ Torrentula® pumping system increases operational efficiencies by enabling bottom-fill from sources of water as shallow as 18" (45 cm). The PowerFill allows for quicker turn times by accessing shallow sources and facilitating quicker dips.

# SIMPLICITY DIVERSITY RELIABILITY

Collapsible, lightweight, tough and easily stowed, the Bambi Bucket has proven itself worldwide as the most powerful and effective equipment for aerial fire suppression.

The award winning Bambi Bucket, compatible with foam, retardant and gel comes complete and ready to deploy with a simple electrical hookup.

A helicopter with a Bambi Bucket is a highly efficient, cost effective firefighting tool. It is the ultimate aerial firefighting solution that puts more suppressant, retardant on the fire than any other system.

## WORLD LEADER

Today, more than 1000 helicopter operators and fire-fighting agencies in over 110 countries rely on the Bambi Bucket. More than 95% percent of all heli-bucketing in the world is done with the Bambi Bucket.

In almost 3 decades since its invention, the reliability, durability, efficiency and operating convenience have been proven in the field.

Choose the world standard in helicopter bucketing... choose Bambi Bucket systems.
